Data Scientist, 8+ years turning ambiguous product analytics questions into decisions via experimentation and statistical modeling, now extending that into AI-assisted development. Experienced in early-stage startups and enterprise.

WORK EXPERIENCE

Data Scientist III	Teladoc Health	Sep 2022 – Present
- Led analytics for GLP-1 Weight Management product launch; defined Product, Member, and Health KPIs; applied difference-in-differences causal analysis and identified +3% lift in device engagement within the target segment. - Increased weigh-in completion among GLP-1 members from 55% to 75% (z-test, $p < 0.05$) by A/B testing an in-app nudge across 80k members over 30 days, removing one of the largest drop-offs in the engagement funnel. - Designed and maintain 20+ dimensional, fact, and intermediate dbt models across member and clinical data for ML, Finance, and Analytics teams, doubling sprint velocity by integrating Cursor and Claude Code into daily development. - Design and ran a member incentive program with monthly reporting, partnering with the Client team to address declining device engagement on an at-risk payer account, driving a 3.5% engagement uplift vs forecast over 6 months.		
Data Scientist II	Teladoc Health	Nov 2020 – Aug 2022
- Built a single source of truth acquisition funnel dashboard (eligibility -> enrollment -> active users) in Tableau, replacing outdated manual spreadsheets across Client, Finance, Member Support and executive leadership. - Built time-series dashboards and performed trend analysis in Databricks to identify members near the $\geq 5\%$ weight-loss threshold, prioritizing limited coaching capacity and driving a 2% increase in members meeting CDC weight loss criteria supporting CDC Diabetes Prevention Program Certification. - Migrated reporting pipeline to CloudBees orchestrated Databricks jobs unit Unity Catalog, replacing Jenkins and cutting new-report turnaround time by 15% while improving module reusability and error tracking across teams.		
Data Scientist	Skupos	Dec 2017 - Oct 2020
- As the first Data Analyst, led foundational analytics initiatives, partnering with stakeholders to define KPIs and analytics roadmap; built single source of truth tables and dashboards tracking company-wide product health metrics. - Developed and scaled a Prophet-based time-series forecasting model to predict sales for high-volume SKUs (e.g., Diet Coke) across 150+ convenience stores, automating inventory decisions and reducing over-deliveries and stockouts. - Built a Python + Plotly monitoring dashboard to compare forecasted vs. actual sales and distributor-reported deliveries, establishing a feedback loop to track and improve model performance. - Performed market basket analysis on retail transactions and built Tableau dashboards tracking item rank, market share, and discount spend for Sales and Marketing teams.		

TECHNICAL SKILLS

Programming/Scripting: Python, SQL; AI-Assisted Development using Cursor, Claude Code.
Data Platform & Visualization: dbt, Snowflake, Astronomer, Airflow, AWS, Azure, Databricks, Jenkins, Tableau, Plotly.
Machine Learning & Statistics: scikit-learn (classification, regression), A/B testing, Prophet, SciPy, statsmodels.

EDUCATION

M.S. in Computer Science, Rochester Institute of Technology, USA	Aug 2014 - Dec 2016
B.E. in Computer Science Engineering, Anna University, India	Aug 2010 - Mar 2014

PERSONAL PROJECTS

Marketing Ad A/B Test: Two-Proportion Z-Test Analysis	Aug 2026
Validated 43.1% relative lift in ad conversion (2.55% vs 1.79% control (PSA group), $p < 0.001$) across 588k users using two-proportion Z-test, with a 95% CI excluding zero.	
GitHub repository Kaggle Notebook	
MovieBuff AI – Product Analytics Dashboard & LLM App (Python, Flask, Gemini)	Nov 2025
Architected an AI-driven product analytics dashboard, as measured by the real-time extraction of user engagement trends and personalized recommendations, by engineering a Python data pipeline integrating Notion databases with Gemini AI.	
Paris 2024 Olympics – Statistical Analysis and Visualization (Kaggle, Python, Plotly, SciPy)	Oct 2024
Applied descriptive and inferential statistics (t-test for age by gender, $p < 0.001$; Chi-Squared for country vs. medals, $p < 0.001$), and built interactive Plotly visualizations across 10k+ athletes, uncovering patterns like age-gender differences and medal-country associations at Paris 2024.
